KEY FEATURES

Detects current temperature and humidity and programs alarms when used with the Sensorpro app.

Save and Export historical data.

Display historical data with chart graph.

SPECIFICATIONS

Power Supply: DC 5V/1A, Type C

Backup Battery: AAA 1.5V

Bluetooth: 5.0 2.4GHz

Bluetooth Range: 50m in open area, decreased indoor

Wi-Fi: 802.11 b/g/n 2.4GHz

Operating Temperature: -10°C - 60°C

Operating Humidity: 0-99% (no condensation)

Temperature Accuracy: $\pm 0.3^{\circ}\text{C}$ / $\pm 0.5^{\circ}\text{F}$ (typical)

0.5°C / $\pm 0.9^{\circ}\text{F}$ (max)

Humidity Accuracy: $\pm 2\%$ (typical) $\pm 5\%$ (max)

OVERVIEW

DOWNLOAD THE APP

Download the SensorPro app from the App Store or Google Play by searching "SensorPro".

PAIRING MODE

Plug in the usb cable to the sensor.

If the led on the sensor flashes in red, it is pairing mode and ready for pairing with app.

If the led on the sensor is not flashing, press and hold the button for 3 seconds to enter the pairing mode.

ADD A SENSOR(Thermo-Hygrometer)

1 Take the sensor close your Wi-Fi router.
Make sure you have a 2.4GHz Wi-Fi.

2 Tap on the “+” tab to add your sensor.
Select the Wi-Fi device. (

Note: Enable Bluetooth before starting the pairing process.

3 Register an account, if you have got an account already, then login the account directly.
When you have logged in the account, SensorPro will skip this step automatically.

ADD A SENSOR(Thermo-Hygrometer)

- 4 Tap Add to select your sensor to begin pairing. or tap Next button to paire all devices.

插图

- 2 Input the Wi-Fi password and tap “Next” to continue.

插图

- 2 Tap DONE button to complete the pairing process. Your sensor will appear in the main view.

REAL-TIME DATA

After we added a sensor, SensorPro APP shows real-time data in main view.

SensorPro APP collects real-time temperature and humidity data by Bluetooth if the sensor is within the Bluetooth detection range.

The Bluetooth detection range is about 50 meters in open area and will be decreased in door.

SensorPro APP also collects temperature and humidity data by cloud if the sensor connected with your router after pairing.

The sensor uploads data to cloud every 1 minute when powered by the plug-in USB cable.

Black and blue means real-time data.

Gray means no real-time data.

Red means alert data

SENSOR SETTINGS

Tap Setting button to go to sensor setting view.

SensorPro provide below personalized settings for customer.

① **Rename**

Rename your sensor by tapping Device name.

② **Scenes setting**

Customize your usage scenarios by tapping Scenes setting. SensorPro provides some default scenarios for user with different background image.

You can also customize your background image by tapping . The scene setting will help you remember where you place it.

SENSOR SETTINGS

③ Set alert conditions

SensorPro support to set a temperature and humidity range, when the temperature or humidity is out of range, it will push notification to the user.

Set a humidity range, when the humidity exceed the range, you will receive an alarm immediately.
Note:
Don't kill the app because this may result in missed alarms.
